Problem Statement

Client need a database design for his blog with following specifications.

- Every post has a unique title, description and url.
- Every post can have one or more tags.
- Every post has the name of its publisher and total number of likes.
- Every post has comments given by users along with their name, message, data-time and likes.
- On each post, there can be zero or more comments.

For this set of requirements design a MongoDB schema and implement client app in technology of your choice for the same.
