

Problem Statement

Day 1

A typical course feedback system functions as per the following features:

- Course management.
- Subject management for the course.
- Faculty subject engagement.
- Student registration for the course.
- Student feedbacks for faculty for the subject.

Design MongoDB schema and implement a set of API for the above application. You can use frontend technology of your choice i.e. PHP, Python, NodeJS, and JAVA, etc.

(Necessary assumptions could be made for detailed design.)
